*Twentieth Century Land Settlement Schemes* Roy Jones, Alexandre M.A. Diniz, 2018-10-17 Land settlement schemes, sponsored by national governments and businesses, such as the Ford Corporation and the Hudson's Bay Company, took place in locations as diverse as the Canadian Prairies, the Dutch polders, and the Amazonian rainforests. This novel contribution evaluates a diverse range of these initiatives. By 1900, any land that remained available for agricultural settlement was often far from the settlers' homes and located in challenging physical environments. Over the course of the twentieth century, governments, corporations and frequently desperate individuals sought out new places to settle across the globe from Alberta to Papua New Guinea. This book offers vivid reports of the difficulties faced by many of these settlers, including the experiences of East European Jewish refugees, New Zealand soldier settlers and urban families from Yorkshire. This book considers how and why these settlement schemes succeeded, found other pathways to sustainability or succumbed to failure and even oblivion. In doing so, the book indicates pathways for the achievement of more economically, socially and environmentally sustainable forms of human settlement in marginal areas. This engaging collection will be of interest to individuals in the fields of historical geography, environmental history and development studies.

*Recent Advances in Ensembles for Feature Selection* Verónica Bolón-Canedo,Amparo Alonso-Betanzos,2018-04-30 This book offers a comprehensive overview of ensemble learning in the field of feature selection (FS), which consists of combining the output of multiple methods to obtain better results than any single method. It reviews various techniques for combining partial results, measuring diversity and evaluating ensemble performance. With the advent of Big Data, feature selection (FS) has become more necessary than ever to achieve dimensionality reduction. With so many methods available, it is difficult to choose the most appropriate one for a given setting, thus making the ensemble paradigm an interesting alternative. The authors first focus on the foundations of ensemble learning and classical approaches, before diving into the specific aspects of ensembles for FS, such as combining partial results, measuring diversity and evaluating ensemble performance. Lastly, the book shows examples of successful applications of ensembles for FS and introduces the new challenges that researchers now face. As such, the book offers a valuable guide for all practitioners, researchers and graduate students in the areas of machine learning and data mining.

**Discovery and Selection of Semantic Web Services** Xia Wang, Wolfgang A. Halang, 2012-09-21 For advanced web search engines to be able not only to search for semantically related information dispersed over different web pages, but also for semantic services providing certain functionalities, discovering semantic services is the key issue. Addressing four problems of current solution, this book presents the following contributions. A novel service model independent of semantic service description models is proposed, which clearly defines all elements necessary for service discovery and selection. It takes service selection as its gist and improves efficiency. Corresponding selection algorithms and their implementation as components of the extended Semantically Enabled Service-oriented Architecture in the Web Service Modeling Environment are detailed. Many applications of semantic web services, e.g. discovery, composition and mediation, can benefit from a general approach for building application ontologies. With application ontologies thus built, services are discovered in the

same way as with single domain ontologies, and the mediation problem between service ontologies is solved. Further, an ontology-based approach to improve service discovery is proposed and validated. Within the service model, a service selection approach oriented at quality criteria is proposed. It normalises diverse qualities of a service in their respective metrics and employs a service selection algorithm based on soundness.

Financial Inclusion and Digital Transformation Regulatory Practices in Selected SADC Countries Howard Chitimira, Tapiwa Victor Warikandwa, 2023-03-28 This book investigates the regulation and promotion of financial inclusion and provides a comparative analysis of the regulation, promotion and enforcement of the relevant laws in the SADC (in particular, South Africa, Namibia, Botswana and Zimbabwe), as well as the challenges of financial inclusion. In turn, it

evaluates financial inclusion in the context of specific challenges faced by unbanked and underbanked customers, who are easy targets for cyber criminals because they tend to have lower levels of digital literacy. The book presents novel discussions that identify the challenges and flaws associated with the enforcement of financial inclusion laws and related measures intended to promote financial inclusion in the SADC region. This is primarily done in order to reveal the current strengths and weaknesses of financial inclusion laws in relation to certain aspects of the companies, securities and financial markets in the region. For example, there is no common financial inclusion instrument/law that is effectively and uniformly applied throughout the SADC. This has impeded the enforcement authorities' efforts to effectively combat financial exclusion across the region. The book is likely the most comprehensive study to date on the regulation and promotion of financial inclusion in the SADC region and fills a major gap in SADC and African legal jurisprudence. As such, it offers a valuable asset for policymakers, attorneys, bankers, securities (share) holders, and other market participants who deal with financial inclusion, as well as undergraduate and graduate students interested in the topic.
