The Longevity Economy Joseph F. Coughlin, 2017-11-07 Oldness: a social construct at odds with reality that constrains how we live after middle age and stifles business thinking on how to best serve a group of consumers, workers, and innovators that is growing larger and wealthier with every passing day. Over the past two decades, Joseph F. Coughlin has been busting myths about aging with groundbreaking multidisciplinary research into what older people actually want -- not what conventional wisdom suggests they need. In *The Longevity Economy*, Coughlin provides the framing and insight business leaders need to serve the growing older market: a vast, diverse group of consumers representing every possible level of health and wealth, worth about \$8 trillion in the United States alone and climbing. Coughlin provides deep insight into a population that consistently defies expectations: people who, through their continued personal and professional ambition, desire for experience, and quest for self-actualization, are building a striking, unheralded vision of longer life that very few in business fully understand. His focus on women -- they outnumber men, control household spending and finances, and are leading the charge toward tomorrow's creative new narrative of later life -- is especially illuminating. Coughlin pinpoints the gap between myth and reality and then shows businesses how to bridge it. As the demographics of global aging transform and accelerate, it is now critical to build a new understanding of the shifting physiological, cognitive, social, family, and psychological realities of the longevity economy.

The Cystic Fibrosis Transmembrane Conductance Regulator Kevin L. Kirk, David C. Dawson, 2003-10-31 The CFTR

chloride channel is one of the most well studied transport proteins in biology. Yet there remain many mysteries about the functional properties and biological roles of this ABC transporter. The Cystic Fibrosis Transmembrane Conductance Regulator addresses a select series of 'hot' topics that relate to the function of CFTR, and the links between CFTR dysfunction and human disease (i.e., cystic fibrosis). The timeliness of these topics distinguishes this collection from previous volumes of this type. Given the general interest in CFTR, this collection will appeal to a broad readership with interests in CFTR, cystic fibrosis, ion channels and ABC transporters.

The American Superintendent 2020 Decennial Study Christopher H. Tienken, 2021-04-19 The 2020 AASA Decennial Study of the Superintendent is an extension of national decennial studies of the American school superintendent that began in 1923. The research was conducted in late 2019 and early 2020. The results are presented in various ways throughout the

study, ranging from aggregate findings to two and three level crosstabs that disaggregate data by eight different enrollment categories. Just as findings from previous decennial studies suggested, the various job-related happenings of superintendents are not always homogeneous. They can be influenced by a multitude of factors such as district enrollment, demographic characteristics of the superintendents, and characteristics of the students and communities they serve.

Cyclin Dependent Kinase 5 (Cdk5) Nancy Y. Ip, Li-Huei Tsai, 2009-02-28 Cyclin Dependent Kinase 5 provides a comprehensive and up-to-date collection of reviews on the discovery, signaling mechanisms and functions of Cdk5, as well as the potential implication of Cdk5 in the treatment of neurodegenerative diseases. Since the identification of this unique member of the Cdk family, Cdk5 has emerged as one of the most important signal transduction mediators in the development, maintenance and fine-tuning of neuronal functions and networking. Further studies have revealed that Cdk5 is also associated with the regulation of neuronal survival during both developmental stages and in neurodegenerative diseases. These observations indicate that precise control of Cdk5 is essential for the regulation of neuronal survival. The pivotal role Cdk5 appears to play in both the regulation of neuronal survival and synaptic functions thus raises the interesting possibility that Cdk5 inhibitors may serve as therapeutic treatment for a number of neurodegenerative diseases.

Network Pharmacology Shao Li, 2021-09-29 This book introduces “network pharmacology” as an emerging frontier subject of systematic drug research in the era of artificial intelligence and big data. Network Pharmacology is an original subject of fusion system biology, bioinformatics, network science and other related disciplines. It emphasizes on starting from the overall perspective of the system level and biological networks, the analysis of the laws of molecular association between drugs and their treatment objects, reveals the systematic pharmacological mechanisms of drugs, and guides the research and development of new drugs and clinical diagnosis and treatment. After it was proposed, network pharmacology has been paid attention by researchers, and it has been rapidly developed and widely used. In order to systematically reveal the biological basis of diagnosis and treatment in traditional Chinese medicine and modern medicine, we proposed a new concept of network target for the first time, which has become the core theory of network pharmacology. The core principle of a network target is to construct a biological network that can be used to decipher complex diseases. The network is then

used as the therapeutic target, to which multicomponent remedies are applied. This book mainly includes four parts: 1) The concept and theory of network pharmacology; 2) Common analysis methods, databases and software in network pharmacological research; 3) Typical cases of traditional Chinese medicine modernization and modern drug research based on network pharmacology; 4) Network pharmacology practice process based on drugs and diseases.

Found Jayne Rylon, 2021-04-13 From New York Times and USA Today bestselling author Jayne Rylon comes a steamy new multi-partner standalone series set in the Powertools universe. The Shields security team accepts missions in the grey area of both law and morality that no one else wants or can handle. They're a ragtag bunch of special ops soldiers, ex-government agents, and hackers wrangled by a former construction worker who aspired to be a superhero's sidekick when he grew up. What could go wrong when they turn their sights on a human trafficking ring that might have been the reason their coordinator's sister disappeared nearly thirty years ago? Nolan Skalbeck is sure their assignment is a bad bet. Regardless of whether or not they find the hauntingly gorgeous woman their artist sketched or not, the horrific things he discovers about the operation they've infiltrated convinces him they have to shut it down for good by whatever means necessary. What he doesn't expect is to fall for a woman who already has a partner, and is willing to share him with Nolan. Once he has, it will take every bit of his strength and training to keep from losing them both. Even if he's successful, how will

he convince them, himself included, that he's not a horrible person—like the ones they've been surrounded by for most of their lives—even though he hunts and destroys evil bastards for a living?
