ShipPlotter - A User Guide for the Ship Spotting Enthusiast (Contains Greyscale Images) Lionel K. Anderson MSc, 2010-01-08 ShipPlotter is a unique piece of software that enables a user to have a quasi live radar type display of shipping in their local coastal region or other regions and waterways around the world. The software decodes radio signals, received using a VHF radio receiver or scanner, from ships transmitting digital data using the marine Automatic Identification System (AIS). The book provides an excellent description of the AIS system and messaging. ShipPlotter visually displays the position and identification of each ship either as radar view or on a chart created from a graphic image file, a

satellite image download or a downloaded Open Street Map. Whilst mariners, small boat owners and yachtsmen can use the ShipPlotter software this book is written for and intended solely for the hobbyist and ship-spotting enthusiast. Its contents therefore should not be used as any sort of guidance or advice for those who are not firmly fixed to their seats in the comfort of their homes on dry ground!

The Definitive Guide to ImageMagick Michael Still, 2006-11-09 * The Definitive Guide to ImageMagick is the first book to cover ImageMagick (<http://www.imagemagick.org/>) comprehensively, one of the most popular open source software suites for creating and manipulating images. * Beginner /Intermediate Programmers and Web Developers looking for an automated solution for image manipulation; this book explains how ImageMagick's features can be incorporated in a variety of applications. * The author and review team is unusually strong: the author has been involved in large-scale image processing and storage for the past several years. And the creators of ImageMagick were closely involved in the book's technical review.

Image-Based Damage Assessment for Underwater Inspections Michael O'Byrne, Bidisha Ghosh, Franck Schoefs, Vikram Pakrashi, 2018-07-18 Inspection is crucial to the management of ageing infrastructure. Visual information on structures is regularly collected but very little work exists on its organised and quantitative analysis, even though image processing can significantly enhance these inspection processes and transfer real financial and safety benefits to the managers, owners and users. Additionally, new opportunities exist in the fast evolving sectors of wind and wave energy to add value to image-based inspection techniques. This book is a first for structural engineers and inspectors who wish to harness the full potential of cameras as an inspection tool. It is particularly directed to the inspection of offshore and marine structures and the application of image-based methods in underwater inspections. It outlines a set of best practice guidelines for obtaining imagery, then the fundamentals of image processing are covered along with several image processing techniques which can be used to assess multiple damage forms: crack detection, corrosion detection, and depth analysis of marine growth on offshore structures. The book provides benchmark performance measures for these techniques under various visibility conditions using an image repository which will help inspectors to envisage the effectiveness of the techniques when applied. MATLAB® scripts and access to the underwater image repository are included so readers can run these techniques themselves. Practising engineers and managers of infrastructure assets are guided in image processing based inspection. Researchers can use this book as a primer, and it also suits advanced graduate courses in infrastructure management or on applied image processing.
