Image-Guided Cancer Therapy Damian E. Dupuy, Yuman Fong, William N. McMullen, 2013-08-06 Image-Guided Cancer Therapy: A Multidisciplinary Approach provides clinicians with in-depth coverage of the growing, dynamic field of interventional oncology. Combining the knowledge of expert editors and authors into one powerhouse reference, this book looks at tumor ablation, HIFU, embolic therapies, emerging technologies, and radiation therapy throughout the body (liver, bone, breast, gynecologic and prostate cancers, to name just a few) , and includes discussion of different imaging modalities. In the words of Peter Mueller, MD, author of the book's Foreword: "... The senior authors are all world renowned experts in interventional oncology, which is another example of the high quality authorship and experience that is brought to this book. The later chapters discuss therapies that are simply not covered in any other source. Everyone who is doing or wants to do ablation therapies and interventional oncology will face a time when they will be asked to use their expertise in less used and less investigated areas. There is nowhere else where the reader can get information on the prostate, breast, and gynecologic areas, and especially pediatrics....This book is an outstanding contribution to the literature and will become a 'must read' for all physicians who are interested in Interventional Oncology."

The Passion Projects Melanie Micir, 2024-06-04 How modernist women writers used biographical writing to resist their exclusion from literary history It's impossible, now, to think of modernism without thinking about gender, sexuality, and the diverse movers and shakers of the early twentieth century. But this was not always so. The Passion Projects examines biographical projects that modernist women writers undertook to resist the exclusion of their friends, colleagues, lovers, and companions from literary history. Many of these works were vibrant efforts of modernist countermemory and counterhistory

that became casualties in a midcentury battle for literary legitimacy, but that now add a new dimension to our appreciation of such figures as Radclyffe Hall, Gertrude Stein, Hope Mirrlees, and Sylvia Beach, among many others. Melanie Micir explores an extensive body of material, including Sylvia Townsend Warner's carefully annotated letters to her partner Valentine Ackland, Djuna Barnes's fragmented drafts about the Baroness Elsa von Freytag-Loringhoven, Margaret Anderson's collection of modernist artifacts, and Virginia Woolf's joke biography of her friend and lover Vita Sackville-West, the novel *Orlando*. Whether published in encoded desire or squirreled away in intimate archives, these "passion projects" recorded life then in order to summon an audience now, and stand as important predecessors of queer and feminist recovery projects that have shaped the contemporary understanding of the field. Arguing for the importance of biography, *The Passion Projects* shows how women turned to this genre in the early twentieth century to preserve their lives and communities for future generations to discover.

*Old Saint Peter's, Rome* Rosamond McKitterick, John Osborne, Carol M. Richardson, Joanna Story, 2013-11-07 St Peter's Basilica in Rome is arguably the most important church in Western Christendom, and is among the most significant buildings anywhere in the world. However, the church that is visible today is a youthful upstart, only four hundred years old compared to the twelve-hundred-year-old church whose site it occupies. A very small proportion of the original is now extant, entirely covered over by the new basilica, but enough survives to make reconstruction of the first St Peter's possible and much new evidence has been uncovered in the past thirty years. This is the first full study of the older church, from its late antique construction to Renaissance destruction, in its historical context. An international team of historians, art historians, archaeologists and liturgists explores aspects of the basilica's history, from its physical fabric to the activities that took place within its walls and its relationship with the city of Rome.

Thermoplasmonics Guillaume Baffou,2017-10-19 Plasmonics is an important branch of optics concerned with the interaction of metals with light. Under appropriate illumination, metal nanoparticles can exhibit enhanced light absorption, becoming nanosources of heat that can be precisely controlled. This book provides an overview of the exciting new field of

thermoplasmonics and a detailed discussion of its theoretical underpinning in nanophotonics. This topic has developed rapidly in the last decade, and is now a highly-active area of research due to countless applications in nanoengineering and nanomedicine. These important applications include photothermal cancer therapy, drug and gene delivery, nanochemistry and photothermal imaging. This timely and self-contained text is suited to all researchers and graduate students working in plasmonics, nano-optics and thermal-induced processes at the nanoscale.

How "God" Works Marshall Brain, 2015-01-06 The founder of HowStuffWorks.com uses objectivity, logic, and critical thinking to explore the question of God's reality in an honest way. Does God exist? Using an intellectually rigorous, scientific approach, Marshall Brain—the founder of HowStuffWorks.com and author of the How Stuff Works series—sets out to resolve the eternal debate once and for all. With a compelling sense of curiosity, he breaks down mankind's search for a higher power, tackling such quandaries as: Who is God? What are his attributes? What is God doing and why? How does God interact with humanity? And ultimately, how can humans know with certainty whether God is real or imaginary? How "God" Works is an enlightening journey in critical thinking that challenges readers to boldly approach the subject of personal faith and put aside intuition in favor of objectivity and logic. "Takes readers on a journey of critical thinking . . . it is the combination of all the arguments made and the approach to those arguments that make this book so convincing." —Skeptic Ink "Brain subjects Christianity to withering analysis . . . He is precise and convincing in his analytical process." —TheHumanist.com

Beyond Terror Chris Abbott, John Sloboda, Paul Rogers, 2011-11-30 Is international terrorism really the single greatest threat to world security? Since the 9/11 attacks, many Western governments assume terrorism to be the greatest threat we face. In response, their dangerous policies attempt to maintain control and keep the status quo by using overwhelming military force. This important book shows why this approach has been such a failure, and how it distracts us from other, much greater, threats of climate change, competition over resources, marginalisation of the majority of the world and global militarisation. Unless urgent, coordinated action is taken in the next 5-10 years on all these issues it will be almost impossible to avoid the earth becoming a highly unstable place by the middle years of this century. Beyond Terror offers an alternative path for politicians, journalists and concerned citizens alike.

The Children of Atomic Bomb Survivors National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, 1991-02-01 Do persons exposed to radiation suffer genetic effects that threaten their yet-to-be-born children? Researchers are concluding that the genetic risks of radiation are less than previously thought. This finding is explored in this volume about the children of atomic bomb survivors in Hiroshima and Nagasaki—the population that can provide the

greatest insight into this critical issue. Assembled here for the first time are papers representing more than 40 years of research. These documents reveal key results related to radiation's effects on pregnancy termination, sex ratio, congenital defects, and early mortality of children. Edited by two of the principal architects of the studies, J. V. Neel and W. J. Schull, the volume also offers an important comparison with studies of the genetic effects of radiation on mice. The wealth of technical details will be immediately useful to geneticists and other specialists. Policymakers will be interested in the overall conclusions and discussion of future studies.

**Examination of the U.S. Air Force's Aircraft Sustainment Needs in the Future and Its Strategy to Meet Those Needs** National Research Council, Division on Engineering and Physical Sciences, Air Force Studies Board, Committee on Examination of the U.S. Air Force's Aircraft Sustainment Needs in the Future and Its Strategy to Meet Those Needs, 2011-11-17 The ability of the United States Air Force (USAF) to keep its aircraft operating at an acceptable operational tempo, in wartime and in peacetime, has been important to the Air Force since its inception. This is a much larger issue for the Air Force today, having effectively been at war for 20 years, with its aircraft becoming increasingly more expensive to operate and maintain and with military budgets certain to further decrease. The enormously complex Air Force weapon system sustainment enterprise is currently constrained on many sides by laws, policies, regulations and procedures, relationships, and organizational issues emanating from Congress, the Department of Defense (DoD), and the Air Force itself. Against the back-drop of these stark realities, the Air Force requested the National Research Council (NRC) of the National

Academies, under the auspices of the Air Force Studies Board to conduct and in-depth assessment of current and future Air Force weapon system sustainment initiatives and recommended future courses of action for consideration by the Air Force. Examination of the U.S. Air Force's Aircraft Sustainment Needs in the Future and Its Strategy to Meet Those Needs addresses the following topics: Assess current sustainment investments, infrastructure, and processes for adequacy in sustaining aging legacy systems and their support equipment. Determine if any modifications in policy are required and, if so, identify them and make recommendations for changes in Air Force regulations, policies, and strategies to accomplish the sustainment goals of the Air Force. Determine if any modifications in technology efforts are required and, if so, identify them and make recommendations regarding the technology efforts that should be pursued because they could make positive impacts on the sustainment of the current and future systems and equipment of the Air Force. Determine if the Air Logistics Centers have the necessary resources (funding, manpower, skill sets, and technologies) and are equipped and organized to sustain legacy systems and equipment and the Air Force of tomorrow. Identify and make recommendations regarding incorporating sustainability into future aircraft designs.
